

Technology vs. Nature

On top of Diamond Head Mountain you can see what is quickly happening to the beautiful world we live in. Every day scientists and inventors are coming up with newer, faster, and better ways of doing things. It may be great in some ways, but sadly usually it makes us give up something else, and that is nature. Before man inhabited the earth, the planet was filled with lively forests, soaring mountains, and clean waters. It was simple, but it was beautiful.

Then as modern man came that soon changed, they tore down these forests, polluted the waters and demolished mountains and replaced it with soaring sky scrappers, massive warehouses, and gigantic cruise liners. The hikers of Diamond Head Mountain can see this because there is a clear distinction of the natural blooming island life, and the new built of city life. The city is slowly creeping up upon the natural world, and soon if not carefully watched and protected it could take over the entire island, and what if this happened to the whole world?

I'll tell you what will happen, there would be no more forests, instead maybe an occasional "virtual" forest that allows you to see the forest but you cannot smell it or be "pestered" by the annoying woodland life. However that is not nature, nor is it how the world is supposed to be. It would be a nightmare if our great grandchildren never saw a real waterfall and all its beauty, just because they were taken over by technology. So it should be our goal as humans to find that balance of technology and nature and then the world would truly be a great place.
